SUMMARY

Senior Computer Information Systems student at King Faisal University seeking a Cooperative Training placement in Systems or Business Analysis. Hands-on experience running feasibility and market studies, designing KPIs and project dashboards, analyzing user-behaviour data, and applying incident-response procedures through six virtual job simulations with BCG, Siemens, stc, Microsoft, and Misk Foundation — alongside two self-built, deployed web applications.

EDUCATION

King Faisal University

Al-Ahsa, Saudi Arabia

Bachelor of Science in Computer Information Systems

Expected Graduation: 2027

Coursework: Systems Analysis & Design, Database Management, Programming, Networks, Information Security, Business Process Management

TECHNICAL SKILLS

- **Business & Systems Analysis:** Requirements gathering, process mapping, feasibility & market studies, use cases, ERD, stakeholder mapping, executive summaries
- **Data & BI:** Power BI, Excel, SQL, data cleaning & visualization, KPI design & tracking
- **Programming & Databases:** SQL, Python, HTML, CSS, JavaScript, database design & normalization
- **Project Management & Security:** Scoping & planning, dashboards & reporting, incident response, threat handling
- **Cloud & AI:** Microsoft Azure fundamentals, machine learning concepts, applied AI basics

EXPERIENCE — VIRTUAL JOB SIMULATIONS (MISK FOUNDATION & FORAGE)

Business Analysis Job Simulation — <i>Boston Consulting Group (BCG) × Misk Foundation</i>	Apr 2026
• Conducted a market study and feasibility analysis; built a budget plan in Excel and an executive summary for decision-makers	
Project Manager Job Simulation — <i>Siemens × Forage</i>	Apr 2026
• Developed key performance indicators (KPIs) for project tracking and managed project dashboards	
Cybersecurity Incident Response Simulation — <i>stc × Misk Foundation</i>	Apr 2026
• Produced incident reports, triaged security threats, and applied the appropriate response procedures	
Cloud Computing Simulation — <i>Microsoft × Misk Foundation</i>	Apr 2026
• Built and integrated cloud solutions on Microsoft Azure, applying core cloud-computing concepts	
Data Analysis Job Simulation — <i>stc × Misk Foundation</i>	Mar 2026
• Analyzed user behaviour, built a predictive model using machine-learning algorithms, and presented the findings	
Project & Community Initiative Management Simulation — <i>Misk Foundation</i>	Mar 2026
• Managed community initiatives, analyzed performance indicators, and built a stakeholder map	

PROJECTS

Ruaa — In-Browser Data Analysis Tool — <i>JavaScript, SVG, Statistics</i>	2026
• Built a client-side engine that profiles any CSV and auto-generates findings in Arabic or English, with an RFC-4180 parser supporting Arabic-Indic digits and regional date formats	
• Designed a type-inference and insight engine covering 13 rule families — missing data, duplicates, Pareto concentration, outliers, skew, correlation, and trend — with 5 chart types hand-drawn in SVG	
alrashidi-25.github.io/ruaa github.com/Alrashidi-25/ruaa	
Masar — Academic GPA Planner — <i>HTML5, CSS3, JavaScript, LocalStorage</i>	2026
• Built an Arabic-first web app calculating semester and cumulative GPA on the 5.0/4.0 Saudi scales, with a target-GPA solver, what-if simulator, multi-semester tracking, and CSV export	
• Shipped fully offline with zero server dependencies and zero third-party libraries
